

Is your life worth 15 minutes and \$99?

This comprehensive screening could save your life.

If you are 55 years of age or older and have:

- A family history of stroke, carotid artery disease or peripheral artery disease
- Ever smoked
- Diabetes
- Heart disease
- High cholesterol
- Leg cramps when you walk or rest

For just \$99, we will screen for three of the most dangerous and silent killers that could be lurking in your body.

Abdominal Aortic Aneurysm Test (4-hour fast required)

A weak lining of the artery wall can cause an abdominal aortic aneurysm (AAA). These fragile bulging arteries can rupture without warning and can cause sudden death.

Stroke/Carotid Artery Ultrasound Test

Tiny deposits in carotid arteries can cause catastrophic events in the body. When deposits form and break away, they can lead to strokes and possibly death. A simple ultrasound can detect build-up and alert you to the need for intervention to prevent a devastating outcome.

Peripheral Artery Disease Test (PAD)

Leg cramps that occur when walking or resting can be a sign of PAD. While most people don't die from PAD, patients with this disease often have dangerous heart blockages that can be repaired if caught in time.

Vascular Laboratory on site

Our state-of-the-art vascular laboratory uses the most up-to-date, non-invasive diagnostic measures to determine the patient's diagnosis and extent of the disease so that our board certified vascular surgeons can recommend appropriate treatment options.
